"Our company was one of the initial advertisers with Cannabis & Tech and we're glad we were. The magazine is very professional, has loads of great information, marrying the cannabis industry with high tech. We continue to advertise with them, not only because of the quality of the publication, but also because of how great they are to work with to get our name out there through social media and great content."

Jamie English,
Director of Marketing,

#1 THE LAB // Solving the 3 Biggest HURC Challenges of Modern Day Grow Ops

Challenge #1 - Getting the Right HURC

Modern grow ops are facing a new challenge: how to get the right HURC (Humidity, Temperature, and CO2) for their plants.

Many growers are using old-school methods to manage their grow ops, but these methods are often inefficient and can lead to higher costs.

One solution is to use modern HURC management systems that can monitor and control the environment in real-time.

These systems can help growers optimize their grow ops, reduce costs, and improve the quality of their harvest.

By using modern HURC management systems, growers can ensure that their plants are always in the best possible environment.

This is the key to success in the modern cannabis market.
